

A scenic landscape featuring a paved road with a dashed yellow center line that curves through a forest of evergreen trees. In the background, a massive, rugged mountain peak with visible horizontal geological strata rises steeply. The sky is overcast and grey. The text 'The VRP solver comparison' is overlaid in white serif font, centered on the image.

The VRP solver comparison

Which

♥ Open Source

🐍 Python Library

is best at solving
the CVRP?

The libraries

-  pyhygese

-  vroom

-  rustvrp

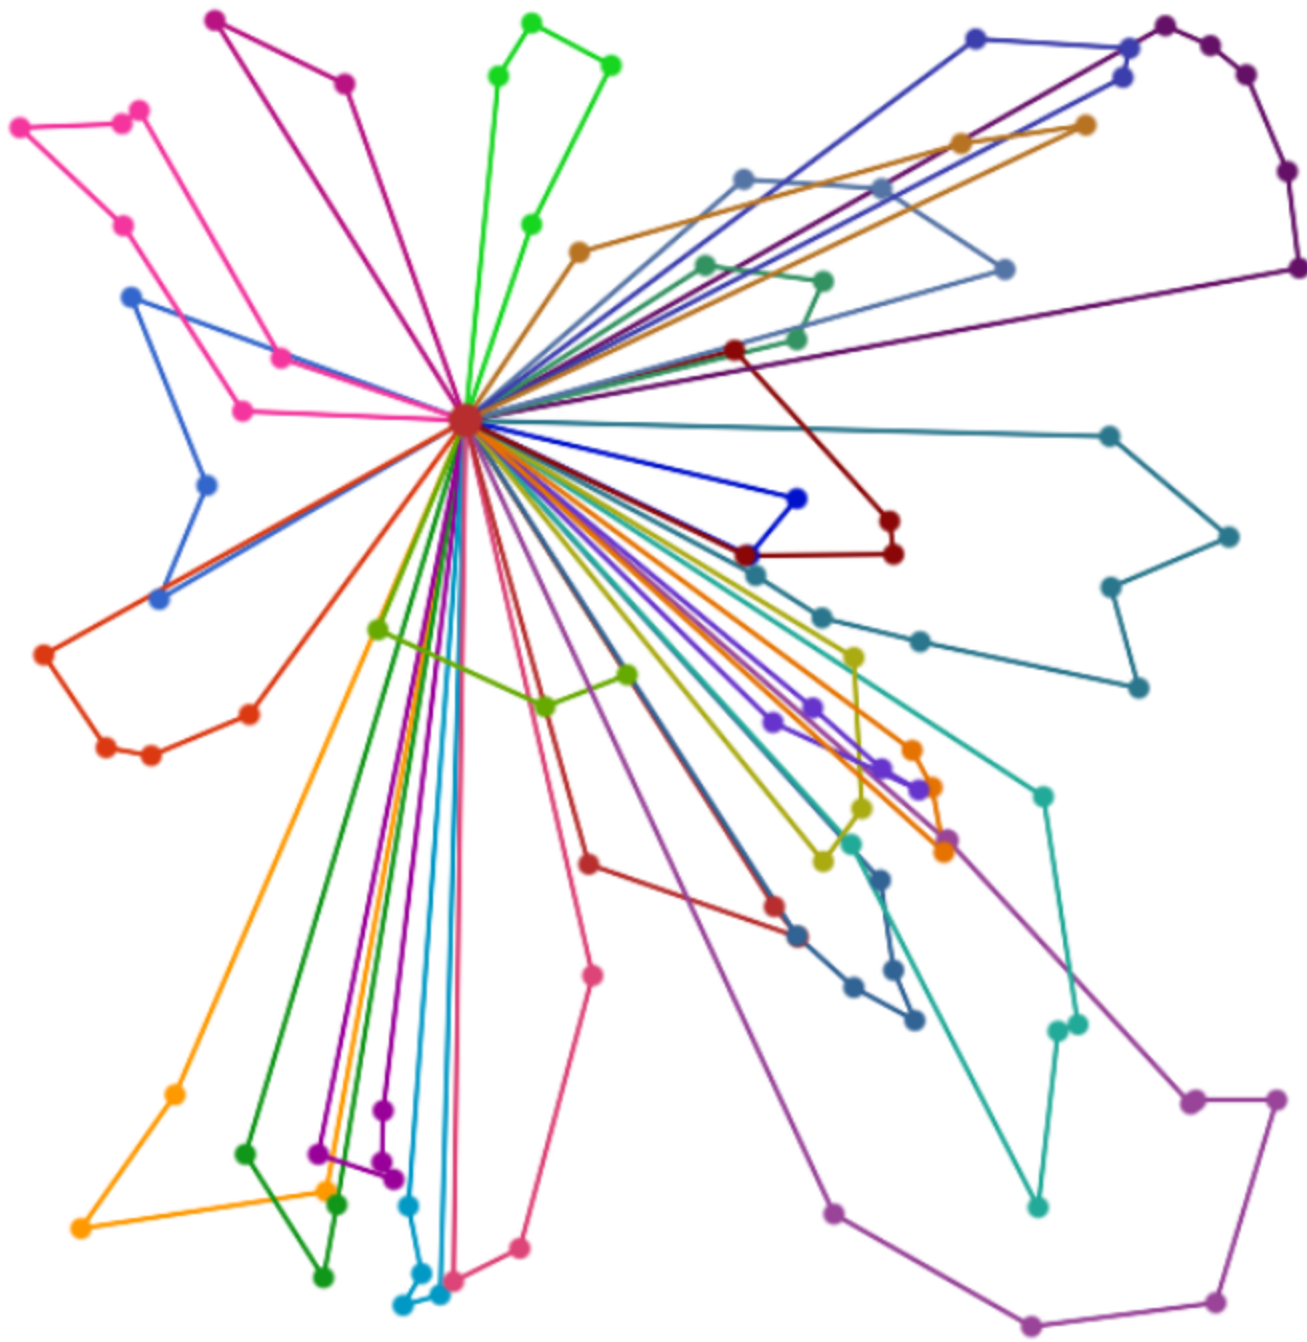

-  pyvrp

-  timefold

-  or-tools

The benchmarks

- 100 different vrp instances
- 100 - 1000 clients

Instance X-n101-k25

Set X from CVRPLib

The results:

Year	Number of people	Percentage
2000	100	1.00%
2001	100	1.00%
2002	100	1.00%
2003	100	1.00%
2004	100	1.00%
2005	100	1.00%
2006	100	1.00%
2007	100	1.00%
2008	100	1.00%
2009	100	1.00%

They do not matter

CVRP $\neq$ real world routing

We need to ask:

- Which constraints can these libraries model?
- How well-documented are they?
- Are they actively maintained?
- And: Why are we restricting ourselves to python?

Stay tuned for deep dives into these Routing Tools

-  pyhygese
-  vroom
-  rustvrp
-  pyvrp
-  timefold
-  or-tools
-  solverforge
